

What is an environmental policy?

“An Environmental Policy is a course of action that is deliberately taken (or not taken) in order to manage the environment.”

Currently, business focus is shifting from a mass-consumer perspective to an environment-aware outlook, whereby Environmental Policies are created and enforced to create a company that exists in harmony with its milieu.

Our commitment to the environment

Fairbridge Technologies strives to create products and services that does not harm the environment, but essentially promote awareness for our planet – our emphasis on recycling and re-using will not only lessen environmental impact, but save your company thousands in the long run.

Our environmental policy can be summarized in four main ideas:

- The use of recyclable packaging materials throughout, including biodegradable device housings and labels
- Re-use of logger devices instead of single use application
- Disposing of old devices in an environmentally safe manner
- Development with the environment in mind – reusability and integrateability being the keywords

An environmentally conscious approach to device use:

New Logger Device

- Pre-configure to customer spec if required
- Package with degradeable card holders and labels
- Supply QA notification stickers and deliver

Customer Mission

- Mission Start, Download and Stop process
- Mission data records captured and centralised
- Loggers placed kept at destination for collection

Recycle Process

- We facilitate collection from your sites
- Loggers will be consolidated in UK for re
- Loggers will be returned monthly for re

Recycled Logger Device

- Loggers inspected and reintrodu
- Pre-configure to customer spec
- Package and dispatch as above
